Subject: **Proposal for change of tariff class of below consumers from S(EV) to CM-R under Karandighi CCC.**

During replacement of one Transformer at - Temarpur, Bilaspur of the existing 25 KVA, villagers protested against low power delivery and demanded for 63 KVA. So, we asked to enhanced the load demand so that we can show it for transformer augmentation. They said as there are 5 consumer's who charges toto from their domestic meters. So, we asked them to get new connections with 1 KW load. But during creation of quotation we mistakenly made it into EV category, instead of commercial, A(CM-R). Therefore, you are requested to correct the tariff class to commercial, A(CM-R).

All 8 cases are related to change of rate category along with tariff class. All changes have been made using T_code ES31 as there is no option for changing the rate category or tariff class from CRM portal for such cases. The note may be routed to IT&C cell for further course of necessary action towards incorporation (and / or) implementation of option in CRM Portal for such changes on similar requirement.

Notes pre-pages may pl

1. As per extant tariff order a promotional time-of-day single part tariff is provided for EV Charging Stations with the following rate:

- (a) Rs. 6.00 per unit during the peak hours (17:00 hrs to 23:00 hrs) ✓
- (b) Rs. 5.50 per unit during the other than peak hours ✓

2. As per sl. no. 7 of Charging Infrastructures for Electric Vehicles (EV)- the revised consolidated Guidelines & Standards of Ministry of Power, GoI Dated 14.01.2022

7. Tariff for supply of electricity to EV Public Charging Stations:

7.1 The tariff for supply of electricity to Public EV Charging Stations shall be a single part tariff and shall not exceed the "Average Cost of Supply" till 31st March, 2025. The same tariff shall be applicable for Battery Charging Station (BCS).

7.2 The tariff applicable for domestic consumption shall be applicable for domestic charging.

7.3 The separate metering arrangement shall be made for PCS (Public Charging Station) so that consumption may be recorded and billed as per applicable tariff for EV charging stations.

Placed to ACE for his kind perusal please.

Cherry
N 02
05/24

The clause under sl no 7.1 of revised guidelines dated 14/01/2022 meant for EV public charging stations (PCS). In the said guidelines PCS has been defined as "EV charging station where any electric vehicle can get its battery recharged"

Whereas, Hon'ble WBERC introduced promotional tariff for EV Charging station for promotion of Electric Vehicles to achieve overall reduction of carbon foot print.

Further, as per the draft Electricity (Rights of Consumers) Second Amendment Rules, 2023, the distribution licensee shall provide a separate connection for supply of Electricity for Electric Vehicle (EV) charging system, if requested by the individual consumer or Group Housing Society or residential colony or Resident Welfare Association (RWA) or similar body registered with Appropriate Government.

From the above we may conclude that, a separate connection with applicable tariff for EV charging station fixed by Hon'ble WBERC may be allowed to EV charging system, if requested by the individual consumer or Group Housing Society or residential colony or Resident Welfare Association (RWA) or similar body registered with Appropriate Government.

To

The Secretary,

West Bengal Electricity Regulatory Commission,

Plot No- AH/5, Premises- MAR 16-1111

Action Area – 1A, New Town, Rajarhat

Kolkata 700163

Sub: Intimation regarding applicable tariff for domestic charging of all type of electric vehicles.

Sir,

With reference to above mentioned subject we would like to mention that as per tariff order of WBERC dated 30.03.2023 a promotional time-of-day single part tariff is provided for EV Charging Stations with the following rate:

- a) Rs. 6.00 per unit during the peak hours (17:00 hrs to 23:00 hrs)
- b) Rs. 5.50 per unit during the other than peak hours

Now applications are receiving from consumers for charging their electric vehicles (2/3/4 wheels) at home irrespective of purpose of usage of the electric vehicles. Since the above mentioned promotional tariff is only for "EV Charging Stations", WBSEDCL has decided to provide "Domestic Tariff" for charging of all type of electric vehicles at their home in line with clause 7.2 of "Charging Infrastructures for Electric Vehicles (EV)-the revised consolidated Guidelines & Standards" of Ministry of Power, GoI dated 14/01/2022. (Copy enclosed for ready reference).

This is for kind information please.

Yours faithfully,

(Kalyan Kumar Maiti)

Chief Engineer (Regulation)

No.12/2/2018-EV (Comp No. 244347)
Government of India
Ministry of Power

Shram Shakti Bhawan, Rafi Marg,
New Delhi, the 14th January, 2022

To,

1. The Secretaries of all the Ministries/ Departments of Government of India
2. The Chief Secretaries of the States/UTs

Subject: Charging Infrastructure for Electric Vehicles (EV) – the revised consolidated Guidelines & Standards-reg

Sir/ Madam,

The "Charging Infrastructure for Electric Vehicles - Guidelines and Standards" were issued by the Ministry of Power on 14.12.2018 which were subsequently revised on 01.10.2019 and an Amendment thereof was issued on 08.06.2020. After careful consideration of progress made and suggestions received from various stakeholders, it has been decided to amend the guidelines to accelerate the E-Mobility transition in the country. In supersession of all previous guidelines in this regard, the revised consolidated guidelines are as follows:

Objectives

- a) To enable faster adoption of electric vehicles in India by ensuring safe, reliable, accessible and affordable Charging Infrastructure and eco-system.
- b) To provide for affordable tariff chargeable from Charging Station Operators/Owners and Electric Vehicle (EV) owners.
- c) To generate employment/income opportunities for small entrepreneurs.
- d) To proactively support creation of EV Charging Infrastructure.
- e) To encourage preparedness of Electrical Distribution System to adopt EV Charging Infrastructure.
- f) To promote energy security and reduction of emission intensity of the country by promotion of entire EV ecosystem

Definitions:

- i. **Electric Vehicle Supply Equipment (EVSE)** shall mean an element in Electric Vehicle Charging Infrastructure (EVCI) that supplies electrical energy for recharging the battery of electric vehicles.
- ii. **Public Charging Station (PCS)** shall mean an EV charging station where any electric vehicle can get its battery recharged.

- 7. Tariff for supply of electricity to EV Public Charging Stations:**
- 7.1 The tariff for supply of electricity to Public EV Charging Stations shall be a single part tariff and shall not exceed the "Average Cost of Supply" till 31st March, 2025. The same tariff shall be applicable for Battery Charging Station (BCS).
- 7.2 The tariff applicable for domestic consumption shall be applicable for domestic charging.
- 7.3 The separate metering arrangement shall be made for PCS so that consumption may be recorded and billed as per applicable tariff for EV charging stations.
- 7.4 DISCOMs may leverage on funding from the Revamped Distribution Sector Scheme (RDSS) under 'Part A – Distribution Infrastructure' for the general upstream network augmentation necessitated due to the upcoming charging infrastructure in various areas. The cost of such works carried out by the DISCOMs with the financial assistance from Government of India under the Revamped Scheme shall not be charged from the consumers for Public Charging Stations for EVs.
- 8. Service charges at PCS:**
- 8.1 Charging of EVs is a service as already clarified by Ministry of Power vide letter No. 23/08/2018-R&R dated 13.04.2018.
- 8.2 As electricity is being provided at concessional rates and also considering the fact that subsidy is being provided by the Central/State Governments in many cases for setting up Public Charging Stations, the State Government shall fix the ceiling of Service Charges to be charged by such PCS/FCS.
- 9. Provision of land at promotional rates for Public Charging Stations (PCS):**
- 9.1 In initial years the penetration of Electric Vehicles on road is increasing gradually. Consequently, the utilization rate for the Public Charging Stations is very low. High cost of rent for land and chargers coupled with no definite visibility of revenues makes the overall investment proposition for setting up a public Charging Station challenging in present scenario.
- 9.2 Accordingly, it is provided that the land available with the Government/Public entities shall be provided for installation of Public Charging Stations to a Government/Public entity on a revenue sharing basis for installation of Public Charging Station at a fixed rate of ₹1/kWh (used for charging) to be paid to the Land-owning Agency from such PCS business payable on quarterly basis. A model revenue sharing agreement is placed at Annexure –IV. Such revenue sharing agreement may be initially entered by parties for a period of 10 years. The Revenue Sharing Model may also be adopted by the public Land-owning agency for providing the land to a private entity for installation of Public Charging Stations on bidding basis with floor price of ₹1/kWh.
- 9.3 Furthermore, based on available charging technologies and their evolution, type of vehicles, the types of chargers, indicating number of charging points required for setting up adequate PCS within the local urban areas including the building premises of all building types and with the long term vision of implementing 'electric mobility' during the next 30 years, amendments have been made in the relevant sections (Chapter 10) of the Model Building Bye-laws, 2016 and the Urban and Regional Development Plans Formulation and Implementation Guidelines (URDPFI – 2014)
